Objectives

To develop a system that would ensure strict compliance with the tax reforms and would enable the Department to deal with increased volume of operations without increasing headcount

“ They do work to a very high standard. They apply information engineering disciplines to the work they do, and they do understand how important it is to meet customer expectations.

Founder, teleologica
Boutique Management Consultant Firm

Product description

The tax reform on the island with the introduction of Goods and Services Tax was the key driving force for the project. The existing IT solutions were unable to cope with the volume of transactions that would need to be processed after the reform takes effect.

teleologica and ELEKS developed a new comprehensive system, CAESAR II, that allowed supporting administration and business processes of import GST, as well as administration and collection of customs and excise duty. CAESAR II supports all processes and workflows of Customs and Immigration Services as required by legislation. The system was built to enable integration between government and business systems on the transactional level.

Key features

- Capability of handling over 10,000 consignments a week with capacity to accommodate future volumes growth
- Facility for electronic submission of manifests and declarations before goods and cargo departure
- Payments of different kinds can be accepted from cash and cheque payments to online debit card and BACS payments
- Powerful tools and workflows to implement policy-based goods movement management
- Secure public website providing a full set of Customs-related services
- Clear view of Customs performance and goods movement trends via analytical reporting facilities
- Relief Claims of customs duty, GST and temporary importation can be applied by importers when creating a declaration
- Integration with other States of Jersey Services and outside agencies

Tools and technologies

ASP.NET 2.0, C#, JavaScript
