# Empowering defense organizations to streamline logistics with precision and agility

Government agencies and defense organizations require robust, scalable, and agile logistical processes to respond swiftly to dynamic demands and unforeseen events. Ensuring the seamless coordination of complex supply chains, managing vast inventories, and maintaining the readiness of critical assets are all paramount to national security and operational efficiency.

ELEKS understands these challenges and offers tailored solutions designed specifically for the unique needs of the government and defense sectors. By leveraging our expertise, government agencies and defence organizations can achieve precise inventory management, efficient resource allocation, and superior operational agility.

Since 2021, ELEKS has been dedicated to the design and implementation of SAP-based Logistics Information Systems (LIS) solutions. As an accredited SAP partner, we specialize in delivering consulting, implementation, and support services tailored to our customer's needs. Our approach emphasizes personalized guidance throughout the solutions implementation journey, complemented by training and support to ensure optimal technology utilization.

At ELEKS, we prioritize delivering practical solutions aligned with our client's unique requirements, fostering efficient and effective logistics management.

# ELEKS' SAP S4/HANA Logistics Information System (LIS)

The Logistics Information System (LIS) based on the SAP S4/HANA solution offers benefits that are indispensable for Defense organizations. From streamlining supply chain management to enhancing inventory visibility, LIS empowers Defense entities to optimize their logistical processes with precision and agility.

By providing real-time insights into critical assets and resources, LIS enables proactive decision-making, mitigates risks, and ensures mission readiness. Furthermore, the advanced analytics capabilities of LIS offer actionable intelligence to drive cost savings, improve operational efficiency, and maintain compliance with regulatory standards.

With an in-depth understanding of Defense logistics challenges and ELEKS' proficiency in SAP solutions, we tailored LIS implementations to meet the unique requirements of the Ukraine Ministry of Defense and the Armed Forces of Ukraine (U-MoD), ensuring seamless integration and optimal performance. After successfully putting LIS into operation, ELEKS continues to expand an SAP S4/HANA LIS for U-MoD and add new streams and functionalities.

## ELEKS' Specialty ERPs for Unique Logistics Challenges

In addition to delivering our flagship SAP-based logistics solutions, ELEKS' has years of experience building and deploying logistics platforms designed to meet unique customer requirements using alternative technologies. For instance, our cloud-integrated Panoptic ERP is a rapidly deployable, affordable platform for managing specialized inventory, supply chain, and integrated accounting information solutions. This solution enables quality-related tracking of material within the system that can be directly tied to standard QMS-based protocols.

We also develop fully custom logistics systems. One solution integrated mobile technology with a nationwide warehousing system. This approach streamlined administrative burdens on logistics personnel, while introducing AI-driven analytics for enterprise management.

# The ELEKS Approach

ELEKS is a global leader in affordable software solutions, with decades of experience supporting commercial clients and government customers in areas such as public health, logistics, and energy. ELEKS has over 2,000 employees on three continents, with twelve development centers

in Chicago, Buenos Aires, Berlin, and Tallinn, along with two centers in Poland, two in Croatia, and four in Ukraine. ELEKS delivers high-impact solutions through custom software development, specialty products, and enterprise implementations.
